## PROJECTS

---

**Note:** I provided GitHub Repository for each of my Project, I made them with the help of AI and my own knowledge of those certain skills. For more detail I highly recommend visiting my GitHub Profile: [github.com/habilaris](https://github.com/habilaris)

- A **Portfolio**, Made with Vanilla JS to showcase my skills and projects. I used HTML for structure, CSS for styling and JavaScript for some logic and animations. Since it's a static site I used GitHub pages to host it freely which increased my familiarity with GitHub and its importance. It's one of my projects which I have spent the most time on and improved it time to time by adding different features like dark mode etcetera and fixing bugs.

**GitHub Repo:** [github.com/habilaris/Portfolio](https://github.com/habilaris/Portfolio)

**Live at:** [habilaris.github.io/Portfolio](https://habilaris.github.io/Portfolio)

- A **Weather App**, with my existing knowledge of Vanilla JS, using simple HTML and CSS, this time I wanted to use a framework. That's why I used React JS to get a taste of front-end frameworks and made a Weather App(site) which accurately shows the real-time temperature of all the cities in this world. This was possible by using a Weather API which enhanced my familiarity with API's. And since it

wasn't a static site like the previous one, I used Vercel for its hosting which is famous site for hosting dynamic sites.

**GitHub Repo:** [github.com/habilaris/WeatherLeaf](https://github.com/habilaris/WeatherLeaf)

**Live at:** [weather-leaf.vercel.app](https://weather-leaf.vercel.app)

- A **Database Mini Project**, this was a mini project by our lab assistant. Our aim was to make a front-end page and gather some details from the user and store it in the database. I made a sign up and login page for this purpose to create an account and then login it to a page which says "Welcome". I used python's Flask for the back end to connect the page to my MySQL Database which will store the users Id/Email and encrypted passwords. Although I failed to successfully host it on Vercel, but I am working on it...

## INTERESTS

---

**Coding and Tech:** *I love watching coding tutorials on YouTube from different creators like CodeWithHarry and Bro Code. I am also always eager to hear about new inventions and new technologies in technology.*

**Anime:** *Big fan of Anime, I adore binge watching Anime because their stories really have contributed to my character development. I recently finished Erased and Summertime Rendering. My favorite genres are Dark Psychology and Mystery.*

**Gaming:** *I am also very invested in playing MOBA games like Mobile Legends and some Battle Royale Games like Fortnite and Valorant but haven't played PC games in a while.*

.
